Technical Skills

- JavaScript / TypeScript
- React.js / Vue.js
- Java / Python
- Node.js / Next.js / Express.js
- React Native
- Tailwind / CSS
- REST API / GraphQL
- SQL / PostgreSQL/ NoSQL
- AWS / Supabase / Docker
- GitHub Projects / Jira / Git
- Postman / Jest
- Clean Architecture / Secure API

Experience

Software Engineer - Full-stack

Oct 2024 – Present

DataExpert.io

San Francisco, CA

- Developed of a new **Snowflake-powered query editor**, improving data exploration speed by **60%**, integrating it seamlessly into the analytics platform and enabling users to execute complex data queries.
- Architected and deployed AI-generated quiz system for an **380+ video lectures in AWS cloud** used by over **300+** students over **2500 times**, leveraging transcript generation and NLP techniques to produce **context-aware assessments** with over **5 validated business use cases** (e.g.,customer qualification bootcamp evaluations, certification prep).
- Integrated secure APIs to connect quiz generation with internal services, following **Clean Architecture principles**, ensuring modular, testable, and maintainable code across the stack.
- Engineered a **scalable backend system** in **Python**, leveraging **PostgreSQL, SQL, and AWS** to personalize marketing emails, leading to a **30% increase in customer reach** and a **20% boost in subscription conversions**.
- Designed and implemented a **responsive, accessible UI** for the quiz system using **Next.js and Tailwind**, achieving a **98% Lighthouse Accessibility score** and increasing daily quiz interactions by **40%**.

Software Engineer Intern

May 2022 – Aug 2022

Dex Software LLC

Santa Clara, CA

- Designed and deployed multilingual navigation systems using React hooks (Theme, State, Effect), i18next, and structured RESTful APIs, enhancing localization performance and accessibility for 600K+ monthly users.
- Streamlined cross-border feature development by leveraging Unix utilities, Jira, and GitHub under Scrum methodology, improving sprint velocity and maintaining high engineering standards.

Software Engineer Intern - Frontend

June 2021 – Aug 2022

MENTIUM.IO

Austin, TX

- Engineered and optimized user-facing features with React, ensuring seamless UI/UX integration and frontend-backend compatibility, while reducing production defects by 60% through rigorous unit testing (Jest) and debugging (Chrome DevTools), significantly improving project delivery efficiency.

Projects

Moonchies - Menstrual based Nutrition Health App | React Native, TypeScript, Supabase, Postgres

- Leading the development of a **bio-hacking menstrual health app** that delivers personalized, phase-based nutrition plans to support women's wellness. Driving product strategy and overseeing user research to shape a tailored UX.
- Instrumented the app with Supabase **logs and custom telemetry** to track user engagement, phase accuracy, and diet adherence, informing iterative product improvements.
- Designed a **secure, scalable backend using Supabase and PostgreSQL** with modular schema and role-based access control, enabling privacy-compliant, personalized nutrition delivery.

ChangeLog++ - is a full stack web application designed to generate change logs| Next.js, Typescript

- Full-stack app that auto-generates clear changelogs and contributor credits from repo commit history
- Won Audience Choice Award, collaborated with top-performing engineers and founders.

Education

Pace University

December 2023

Bachelor of Computer Science - GPA 3.5

New York City, NY

Relevant Courses: Data Structures and Algorithms, Database Management, Software Engineering, Operating Systems
